

The world's famous brand name in Karaoke.

Designed in the U.S.A. with end user's needs in mind.

Product Feature

The DX-213 is one of our latest amplifiers features three channel outputs. It is designed locally by the engineering team of Better Music Builder. Our team has spent many years to conduct researchs and collect opinions and feedbacks from the customers to design this unique product.

The Best Value

The built-in three channel system in the DX-213 process music and vocal separately that preserves the quality of the songs and the characteristic of your voice. Also, the advanced microphone feedback suppression design ensures the best clarity. Not to mention the last vocie cancellation technology that filters the human voice automaticaly and turns your favorite audio CD into a karaoke CD.

The world's famous brand name in Karaoke.

Designed in the U.S.A. with end user's needs in mind.

Installation example

For the best sound effect and song quality, we highly recommend you to configure the karaoke system as the diagram below. Since the large primary speakers are mainly used for the music, we suggest you to hang the primary speakers on the two sides of the wall while the center speaker, which is responsible for the vocal, should be placed in between.
