

## 4-CHANNEL SPEAKER SYSTEM CONNECTION DIAGRAM

This diagram just gives you a general idea of 4-channel system setup. The maximum coverage for a 4-channel system is 400 square feet (20' x 20') with a ceiling height of 11 feet. If the area covered is over 400 square feet, it would affect the performance of this system. However, if you add a power amplifier to the system, it would increase the output power, and thus enhance the performance. For safety purpose, we recommend you hiring an audio professional to do the design and installation for you.
